

McDONNELL ANGUS

Welcome to the 20th Annual Big Country Sale.

The bulls selling represent the top of our 2008 bull calves. We don't sell any of our registered bulls as yearlings – guaranteeing you the bulls being offered are what we felt to be the top of our calf crop.

We run the cows on our Badlands unit south of Rhame, North Dakota. It's hilly country that requires a cow to work. We raise beef bulls backed by a very functional set of females. You'll find the bulls to be thick, clean sheathed and strong legged with the capacity to perform efficiently.

We continue to breed to bulls that have positive carcass traits. Matthew Lane has ultrasounded the bulls – this information will be available sale day. Although carcass traits will continue to be important, we still believe that just as important, if not more, are efficient, fertile, productive cows that can stay in the herd. We believe “you can have it all” if you're patient in your breeding program. We think you'll find these bulls loaded with positive genetics.

We fed the bottom end of the bull calves in Kansas in 2001. The first two groups processed went 100% choice, 2.5 Average Yield Grade with no YG 4, 1.06 inch ribeye/100 pounds live weight with NO implants.

Our goal is to produce cattle that are first and foremost profitable on the ranch, then have the genetics to enhance value for those on down the line. It is not always easy, and from the time we wean until sale day, we are constantly culling bulls. Our intent is not to be the largest sale, just the best.

John Smith, DVM, semen tested all of our bulls this fall. Scrotal sizes and actual ultrasound data are included in the catalog. All bulls are BVD-PI tested.

The bulls are GeneStar tested and individually feed efficiency tested.

Thank you Mathew and Joelle Fischer for managing the daily operation of the North Dakota ranch. Your dedication and hard work is greatly appreciated.

We are fortunate to have the following friends and family also providing bulls for this sale.

RFI (Residual Feed Intake) (lbs/day)

The amount of feed intake an animal consumes daily, above or below its maintenance requirements as well as its performance (growth) requirements. A negative RFI is a more efficient bull.

Example: -2.0 means the bull ate 2 lbs. less feed per day than he needed to meet his body maintenance requirements and production needs (ADG). With today's feed costs, that is a savings of 20 cents/day or \$36.00 per feeding period. The difference between a -2.0 and a +2.0 bull is \$72.00 in the feedlot.

If you are keeping replacement females, by selecting for negative RFI, research has shown you have the potential to save close to \$60.00 per year on cow maintenance costs.

UNDERSTANDING EFFICIENCY AND RFI

Historically, the weight of an animal has been the most important component in determining value, which follows closely with production being the most heavily promoted and taught value in agriculture.

However, when you consider that more than 75% of the cost of growing cattle is related to feed inputs, and that 70-75% of the feed consumed by cattle is solely for maintenance requirements, then the importance of improving the efficiency of feed intake becomes very real. With today's feed prices, improving a herd's efficiency of feed utilization is obvious.

WHAT DOES THE RESEARCH SAY

1. Efficiency is highly related to growth and growth is the traditional method of measuring efficiency. The problem is that using growth as a measure of efficiency also increases the size of the animal, which will increase maintenance requirements (70-75% of feed consumed goes toward maintenance requirements), which will increase appetite, which will increase the need for available feeds/grasses.
2. Using RFI will lead to improvements in feed efficiency without compounding the need for additional feeds or increasing mature size.
3. RFI allows you to produce at a level that optimizes on one's management and environment instead of stressing it.
4. RFI is a highly heritable trait, meaning that through genetic identification and then selection, one can make rapid improvements.
5. RFI research has shown that improvement in efficiency can be made as much as 25%.
6. Selecting for efficiency will allow the cattle industry to become more competitive in production with swine and chicken. About 5% of the feed consumed by cattle is converted into protein, while swine and chicken are 14 and 22% respectively.
7. Research has shown there is a 0.90 correlation (very high) between bulls measured for RFI postweaning and how their daughters will perform for efficiency in the cowherd.

QUESTIONS AND ANSWERS

What is the heritability of RFI (Residual Feed Intake)?

0.38-0.40 (Moderately to highly heritable).

How is RFI calculated?

Basically RFI is looking at what the feed intake requirements for maintenance are for the individual bulls and then what the feed intake requirements are for production (each individual bull's ADG) and compares that to what the individual bull consumes.

How much difference can one expect to find in cattle?

Research from Australia, Canada, and the U.S. have consistently found differences of up to 30%. In our first test group of 400 here at Midland, we found up to 40% variance.

If you have two cows weighing 1300 lbs and one produces 15 pounds of milk and the other 20 pounds of milk, wouldn't the other cow at 15 lbs require less feed?

No, and it could just as well be that the 15 lbs. milk producer is a larger consumer of feed which compounds her inefficiency on both feed intake and lower production. That's the importance of measuring RFI. This is a case where size doesn't matter.

What should one be aware of when using RFI?

First and most importantly, efficiency needs to be balanced with production and profitability. High efficiency with low production is no more cost effective than the high production and low efficiency.

Why can't we just use our eye and pick the more moderate, easy-fleshing cow?

Don't confuse size or fleshing ease with efficient productive cattle. Contrary to what some folks believe, RFI is not related to frame size, body type, or body condition. You'll find as many inefficient cows in any frame size and just because they look fat and easy-going doesn't mean they're efficient. A fat cow that is high intake with a 400 lbs calf is not going to generate much profit.

Reading Performance Information

Expected Progeny Difference (EPD) is the estimate of how future progeny of each sire are expected to perform in each of the traits listed.

Calving Ease Direct (CED) - is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW) - expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW) - expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW) - expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Milk EPD (Milk) - is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Marbling EPD (Marb) - expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (REA) - expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

76	600	96	26.35	34		

Weaned Calf Value (\$W) - An index value expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

Scrotal - actual scrotal measurement in centimeters

ADG - Average Daily Gain on a high roughage ration of 44 Mega Cals

F/C - Feed Conversion. Amount of feed on dry matter basis fed to convert one pound of gain.

RFI - Residual Feed Intake / Not Feed Intake. The amount of feed on a dry matter basis maintenance requirements and performance (ADG) requirements. A negative RFI is a more efficient bull.

3210 Angus

John & Pam Patterson

Phone: (406) 445- 2332 or 425-3210

Lots 152-159 represent our most powerful offering to Big Country to date. You will find these bulls consistent in their type and performance and being groups of 1/2 and 3/4 brothers we would expect them to breed that way. They are the very top cut of our 2008 crop, ALL the rest except one that sold at MBT were culled! Give us a call with any questions or come to the ranch we would love to show you their dams.

A *new* AGE IN DNA-MARKER TECHNOLOGY

What are GeneSTAR MVPs

Now GeneSTAR® from Pfizer Animal Genetics provides a new 56 DNA-marker panel that delivers more genetic information on core traits with greater reliability. GeneSTAR MVPs™—or Molecular Value Predictions—measure the molecular breeding values for the traits of feed efficiency, marbling and tenderness. This new panel, *authenticated through a third-party validation process*, will enhance genetic improvement by providing more reliable information to enable greater selection opportunities.

GeneSTAR MVPs incorporate the 11 DNA markers included in the previous GeneSTAR test along with information from an additional 45 DNA markers to form the new 56 DNA-marker panel. MVPs are reported in units of the trait as a prediction of the animal's genetic value.

Trait	Definition	Units	MVP Range*	Average % Reliability**
Feed Efficiency ¹	Difference between an animal's actual and expected feed intake based on its body weight and growth rate	lbs./day	Min: -3.17 Max: 2.38	30%
Marbling ²	Degree of intramuscular fatness in the <i>longissimus dorsi</i> (ribeye) muscle	Marbling Score 0–9	Min: -1.00 Max: 1.11	26%
Tenderness	Force required to shear a cooked steak after postmortem aging	W-B Shear Force (lbs.)	Min: -1.04 Max: 1.89	49%

*The closer the MVP value is to the highlighted Minimum or Maximum in each row, the more favorable the result.

**The reliability value is expressed as a percentage of the maximum accuracy attainable.

Molecular Value Prediction

	FE	Marb	Tend
MVP	-0.73	0.01	-0.93
% Rank	26%	49%	7%

A sample GeneSTAR MVP report with individual percentile rank is shown at left. In addition, overall herd and breed ranges for MVPs and trait accuracies are listed in the report.

How to use GeneSTAR MVPs

The new GeneSTAR MVP reporting system provides information on the animal and its genotype that can be used to make breeding and management decisions. Reading the MVP data, the animal in the example below has a GeneSTAR MVP feed efficiency value of -0.73 lbs. and a % rank value of 26 percent. This means that the MVP value for this animal ranks in the top 26 percent of animals within the same breed.

As a full-service genomics provider, Pfizer Animal Genetics offers a team of professionals to help customers achieve maximum value from the application of test results in production-marketing systems. This includes helping you understand test information and apply results to your own management and marketing programs.

For specific questions regarding animals that may have been recently tested, or any other inquiries relating to the new GeneSTAR system, contact your Pfizer Animal Genetics representative, call 1-877-BEEF DNA or go to www.pfizeranimalgenetics.com.

1 Validated in *Bos Taurus* populations only, additional information available on file for *Bos Indicus*. Feed Efficiency is measured as Net Feed Intake.

2 In NBCEC validation, the marbling MVP is significantly associated with Ultrasound as % IMF at 60 days prior to harvest.

South Devon

The **Big Country South Devon** herd is owned jointly by Jim and Mary Brown of Lodge Grass, Montana and Leo and Sam McDonnell. The South Devon have been the 1st or 2nd high selling breed at Midland Bull Test for the last seven years except one. They are a British breed with strong maternal traits, excellent performance and high cutability (REA).

Contact Jim and Mary Brown 406/ 639-2569 or Leo and Sam McDonnell 406/ 322-4447

One of the first calves ever offered for sale by MJB Shur Loc 106S. His sire was the top of the 2007 Midland sale and was used heavily in the pasture, came back and was named the Reserve Champion bull in Denver. Here is a solid prospect by a performance line of breeding. A solid herd bull prospect.

A very sound made bull with a lot of shape and capacity. His balance, shape and soundness should really bring value to any cow herd. His dam is a moderate cow with lots of rib that always raises a calf year after year that is at the top of the group in performance. He should make a true herd sire.

A lower actual birth weight bull with solid numbers. This calf should bring maternal value to your cow herd. His dam is moderate with an excellent udder and very high production. His paternal grandam, DLCC Claire 12L, could possibly be one of the best cows in the South Devon breed, with a production record that has already accomplished Hallmark Dam status. Several balanced trait leaders are present in his pedigree. Should be an easy fit for any herd.

A full brother to last year's top-selling South Devon to Nichols Farms, NC. You have to appreciate his balanced numbers of low birth, high milk and growth at +53. His dam is a two-time Denver National Champion and has maintained a good calving interval with a sound udder, lots of rib capacity and stays in easy flesh all year long.
