**Justin Cell 307-360-6293**

**Renee Cell 307-360-9136**

We would like to thank everyone for your continued support. We are very excited to have our first February sale. The change to a spring sale will be a better sale with older bulls that are showing more maturity and growth.

The biggest change for our herd is the addition of the 50+ head of Shamrock cows. The Beebe Queen cow family has had a lot of success outside of Wyoming and this sale features several Beebe Queen sons. The Shamrock genetics are solid in their high altitude and carcass performance. We are very honored to be able to continue producing cattle from the Shamrock herd.

The sire groups in this sale are varied in type and performance, but the focus is still to produce bulls that have PAP scores that allow them to be safe to use at elevations above 6000 feet.

All of our Jensen Angus bulls for sale as well as those from Roberts Cattle Company were born in Sublette County. Our cows and herd bulls live at 7200 feet year round and are easy fleshing, tough, high altitude cattle for sure.

The sale bulls have been run in a 350 acre pasture and have to walk to feed and water every day. We feel this gives them the opportunity to have as much natural muscle development as possible.

Justin has fed these bulls native grass hay, second cutting alfalfa and 5 lb per bull of a Jensen bull pellet since November 2010. The bulls are fed as the commercial cattlemen would do and they will not drop off when they get to your place.

We appreciate our neighbors and family near and friends from far for their help this past year. We want to thank Dr. Tim Holt for doing our PAP testing and his help to keep our herd truly high altitude!

Thank you for considering our bulls. We look forward to seeing you on sale day. If you have any questions, don't hesitate to call

Sincerely,

Justin and Renee Jensen and family

## High Mountain Quality Bulls

***Selling  
50 Coming Two Year Old  
and  
20 Yearling Angus Bulls***

**February 12, 2011**

**Sale Starts at 1:00 MST**

**Preview at 10:30 • Lunch at 11:30**

**Sublette County Fairgrounds • Marbleton, WY**

**Sale Day Phones**

307-276-3737 Ag Center Barn  
307-360-9136 Renee Jensen  
303-263-3867 Jeff Earl

**Auctioneer**

Warren Thompson

**Ringmen**

Curt Cox . . . . . Wyoming Livestock Roundup  
Rich O'Connor

**Sale Location**

Sublette County Fairgrounds Ag Center Barn at  
Highway 189 where it joins Hwy 351 just north of  
Marbleton, Wyoming

**Liability**

All persons who attend the sale do so at their own risk.

**Terms and Conditions**

Bulls sell under the terms and conditions of the  
American Angus Association

**Bull Viewing**

Available any time before the sale at their Boulder  
pasture - Hwy 353 approximately 12 miles south of the  
Boulder Store. Sale Day starting at 10:30 - Ag Center  
Barn, Sublette County Fairgrounds.

**PAP Scores**

Unique to Jensen Angus is that the sale bulls will have  
two PAP scores, one taken in September 2009 as calves  
and the other as coming two year olds in October, 2010.  
There is also a brief update on Brisket Disease and PAP  
testing by Dr. Tim Holt of CSU inside the back cover.

**Guarantee**

All bulls sell breeding sound and in good health. They  
will be fertility tested in January 2011 by Dr. Tripp  
Applequist DVM, Farson, WY. All bulls come with a 90  
day first breeding season guarantee.

**Delivery**

Bulls will be delivered free within a 250 mile radius.  
After that, there is a \$50 flat fee mileage charge. Bulls  
need to be moved ASAP due to our upcoming calving date  
of March 1. Please make sure we know what needs to be  
done with your bulls after the sale.

**Lunch**

Refreshments will be available starting at 10:30 and lunch  
will be served at 11:30.

**Accommodations**

Hampton Inn, Pinedale . . . . . 307-367-6700  
The Lodge At Pinedale . . . . . 307-367-8800

Selling 1/2 Interest and Full Possession. W013 is the direct son of one of our featured donors, Shamrock Beebe Queen 1784. She is a member of one of the elite High Altitude and IMF producing cow families in the Angus breed where she currently records an IMF ratio of 3@114 and an individual IMF ratio of 117. W013 carries on the tradition by recording an IMF@127 and PAP scores 39 at both Weaning, and again as an 18 month old. His IMF EPD currently ranks him in the breed's Top 4%, and Top 10% for \$B. W013 recorded a Weaning WDA of 3.13 lbs to ratio 105, an adjusted WR@106, YR@106, and an on-feed ADG@105. A bull we obviously do not recommend for heifers, but a bull we sure think can make a direct genetic impact on a cow herd.

Can be used on heifers. W011 is the most calving ease sire in this sale based on actual birthweight. His BR@73 and an on-feed ADG@103 make him an excellent choice. His grand-dam is a featured donor cow for us, and dam is the maternal brother to W013, Lot 1. Some nice carcass accompanies this bull with a IMF@102 and an REA/Scan Wt ratio of 1.2 where the Angus average is 1.0. Note the excellent 18 month PAP score of 37.

## Zac Roberts

307-859-8282 or cell 307-360-8383

We would like to welcome you to Jensen Angus Bull Sale. We would also like to thank Justin and Renee for inviting us to join them.

Our goal is to raise cattle that can withstand the cold weather and live in high altitudes offered by Sublette County. We are striving to produce calves that wean heavy and will continue to grow as yearlings. Our 29 bull calves average weight on November 2, 2010 was 657 lbs.

Due to brucellosis in 2008, we had to sell our entire cow herd and start over. Our purebred cow herd was purchased from Adams Acres Angus of Firth, ID, Dave Noble of Cora, WY, and SVF Shamrock of Laramie, WY in the fall of 2008.

We will be selling sons from SVF Shamrock Copyright 4926, Horse Butte 30 of 321, HARB Pendleton 765 J H, Lucky 7 VRD 738, and SVF Shamrock Copyright 055U a son of 4926.

We will be offering yearling bulls born in March and April 2010. Our bulls were PAP scored by Dr. Holt on October 17, 2010. We hauled one trailer load down to Boulder to be scored from the five different sires we bred to our cows. We will be testing the rest of the 2010 calf crop at the end of May by Dr. Jeremy Ley. Those of you who buy untested bulls may bring them to our ranch then and we will test them for you free of charge. The bulls will also be fertility test before sale day.

Thank you from Roberts Cattle Company,  
Zac, Patti, Ryan, Tommy, and Maggie

## **PAP Testing**

*By Dr. Tim Holt*

Brisket Disease, also known as High Mountain Disease or Dropsy, is one of the Rocky Mountain region's most costly diseases. The disease is the result of elevated pulmonary arterial pressure caused from lack of oxygen and generally affects only animals at an elevation above 5000 feet.

Cattle differ in how they respond to oxygen shortage. Some are able to tolerate high pressures for a long period of time, while others die quickly. Brisket disease is not limited to one sex or breed, and has been found across all breeds including crossbreeds.

Pulmonary arterial pressures (PAP) are obtained by a procedure called "right heart catheterization." In this procedure, a fine plastic catheter is passed through a needle in the jugular vein, with blood flow into the upper right side of the heart, through a valve, into the right ventricle, through a valve, and into the pulmonary artery just short of the branches to the lungs. Pressure waves are observed on a heart monitor and the monitor gives a direct readout of the true average pressure.

There are two major concerns when evaluating PAP measurements in cattle. The first is the elevation of the test as previously discussed. The second is the age of the animal. Generally the older the animal at the time of testing the more accurate the PAP test. Any animal 11 months of age or older can be tested with a high degree of accuracy and repeatability. We have found that those animals greater than 14 months of age tend to be very accurate and reliable.

The PAP test is the best indicator (tool) available to date for identifying animals predisposed to Brisket Disease. The test is not 100% and should not be used as such. Generally, cattle with pressures of greater than 45 mmhg are considered at risk but other criteria such as age and elevation of test site should be considered. Test scores are not consistently accurate unless done at 6500 feet elevation or higher.

Research has shown that the heritability of Brisket Disease can be quite high, ranging from 42% - 84%. This indicates that cattlemen can successfully select against the disease by culling cattle with high pulmonary arterial pressures. In efforts to cut losses to Brisket Disease, cattlemen should identify those animals, specifically bulls, with high pulmonary arterial pressures and cull them from the herd or avoid adding them to the herd.
